

amani

Pure comfort, architectural design and intelligent engineering

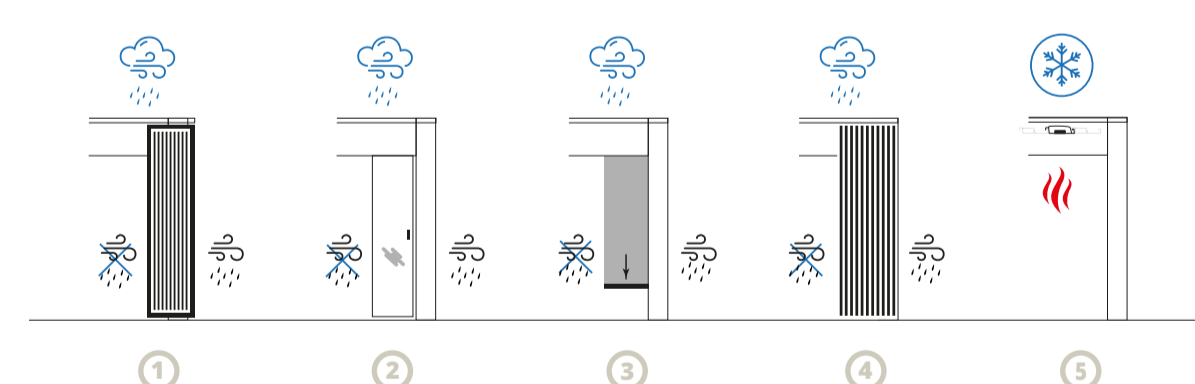

PLAY WITH SUNLIGHT AND SHADOW

Amani lets you control the sunlight - from welcoming the first rays to blocking them on hot days. The blades in the louvred roof can be rotated to let in the light (1) or allowing rising warm air to escape (2). When the sun's position is standing low, features like the louvred canopy and/or side infills are possible to create a pleasant shadow. The fixscreen (3) is retractable in the upper beam and can be positioned at different heights. While our loggia folding and sliding panels (4,5) move in front, between or after columns to receive the desired shadow. Furthermore there is the option to use the outdoor curtains, often combined with glass sliding panels.

SHELTER FROM RAIN, WIND & COLD

To enjoy the outdoors in less favorable weather, built-in sensors automatically adjust the roof. When the rain starts falling, the blades will rotate to a closed position. You can add side infills like loggia panels (1), glass walls (2), and screens (3) for temporary shelter. Permanent shelter, like a storage (4), is possible with a fixed canvas roof and side walls featuring a sliding door. The lineo heat (5) will bring a lovely warmth due to its efficiently located position in the blade.

CONVERT DARKNESS INTO ATMOSPHERE

When the sun sets, the patio cover will be accentuated by the iconic led (1) glowing as an architectural line. Our dynamic spots (2) are designed to highlight a specific area and maintain a closer connection to the environment. Our ambient roof light (3) creates a soft atmospheric light. Equal light distribution can be obtained by the lineo led (4) or storage led (5).
